

Why do Customers love their trellis strung with solar lights?

Adding solar lights to the trellis strands is a truly unique décor option, **they won't help the plants stay green but they just may make the neighbors turn green!** See why below!

Please note: Finial are available separately, crystal strings are not available at this time

The solar lights outline the trellis with an attractive glow increasing sales appeal of the planter or hanging basket

The LED lights consist of 4 strands, each strand is 28 inches long and extends from a central solar panel that has a AA battery backup. (The battery is not included). Each strand of LED lights are wrapped around each of the trellis strands by the Grower after the trellis is assembled or the Gardener may purchase the lights separately as an add-on.

The solar lights light up at dusk which increases the amount of time plants are visible to enjoy.

Each strand of lights has 20 LED lights strung on copper wire approximately every 1.5 inches for outdoor use. Lights are cool to the touch. The solar lights have a 2 year lifespan.

Note that the trellis provides another opportunity to personalize the container, the crystal strings hung from the trellis here, adds a magical touch to this container.

The solar lights and plant combination add automatic evening ambiance, a festive feel to outdoor spaces and seasonal baskets and planters

They light up automatically, no cords are needed. The solar panel can be staked in the soil using the included stake or can be mounted at the top of the trellis if desired. The leading wire connecting the solar panel to the light strings is 3 feet long which allows the solar panel placement to be adjusted as the plant grows..

The 2-way power switch allows the lights to be turned off, if desired. The 2-way function has an option for steady-on lights or flashing lights. Fully charged lights remain on for approximately 6 hours.
